TURBOTM

SCAFFOLDING

Our Wide Width Aluminium Mobile Scaffolding Tower is a great asset, for the home handyman or small business owner that needs a bit of height on a compact platform.

Aluminium mobile towers will give you the height and stability you need to complete any job that needs a certain height with mobility. With each component of scaffold tower being individually erected, it makes for easy for storage and logistics from site to site, in a van or in a utility vehicle (ute).

Every mobile scaffold Tower above 4mtr standing height should be erected by a Qualified Scaffolder.

Turbo Scaffolding suggests that even though the tower is lightweight, it would be easier to erect with 2 people.

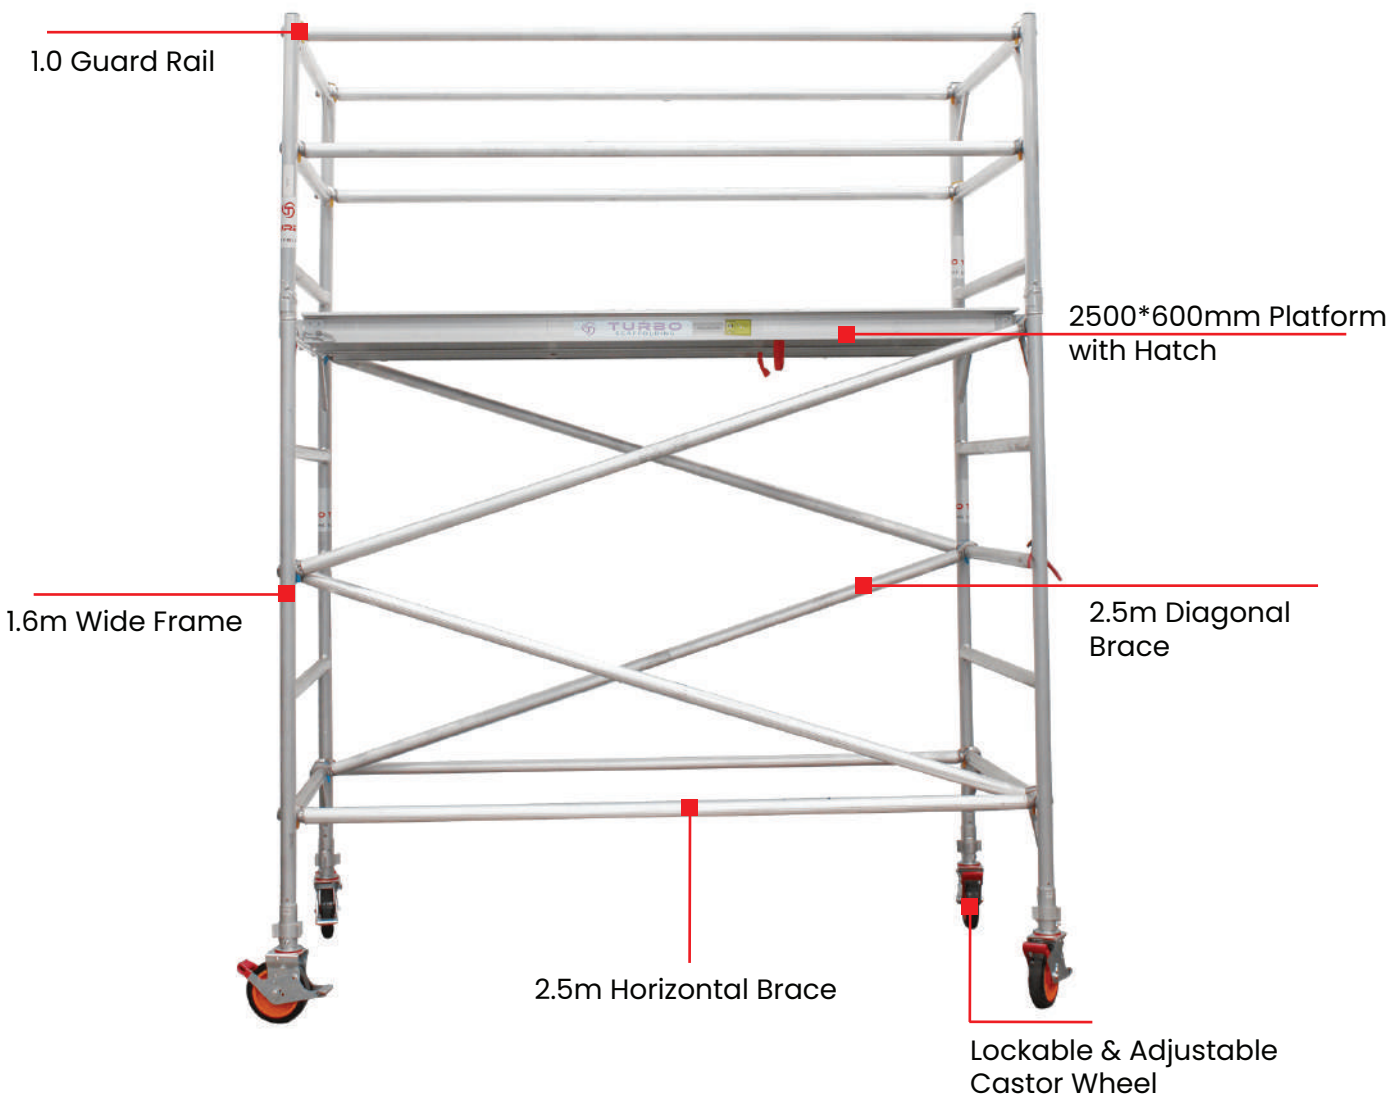

IMPORTANT: It is operator's duty to inspect the components for damage before each use. Avoid contact with acid as this will damage the aluminium beyond repair. Avoid leaving the platform out under constant sun's light and rain to prevent delamination of Platform

Disclaimer

1. The photos printed in this brochure show construction sites whose operation is not our responsibility. As a consequence, we cannot influence whether instructions for erection and/or use are properly observed or whether safety regulations are complied with, especially as these are momentary photos that do not represent the final and definitive state of product use.
2. Consistent with the continued development and improvement of Turbo products, the details contained in this brochure may be changed without notice.
3. The safe use and application of the products must be in accordance with AS3610, Occupational Health & Safety Act, approved Industry Codes of Practice, and any other Regulatory Authority requirements.

1.9m – 2.2m Wide Mobile Tower (Standing Height)

Total Weight: 117.20 kg, SWL: 450kg

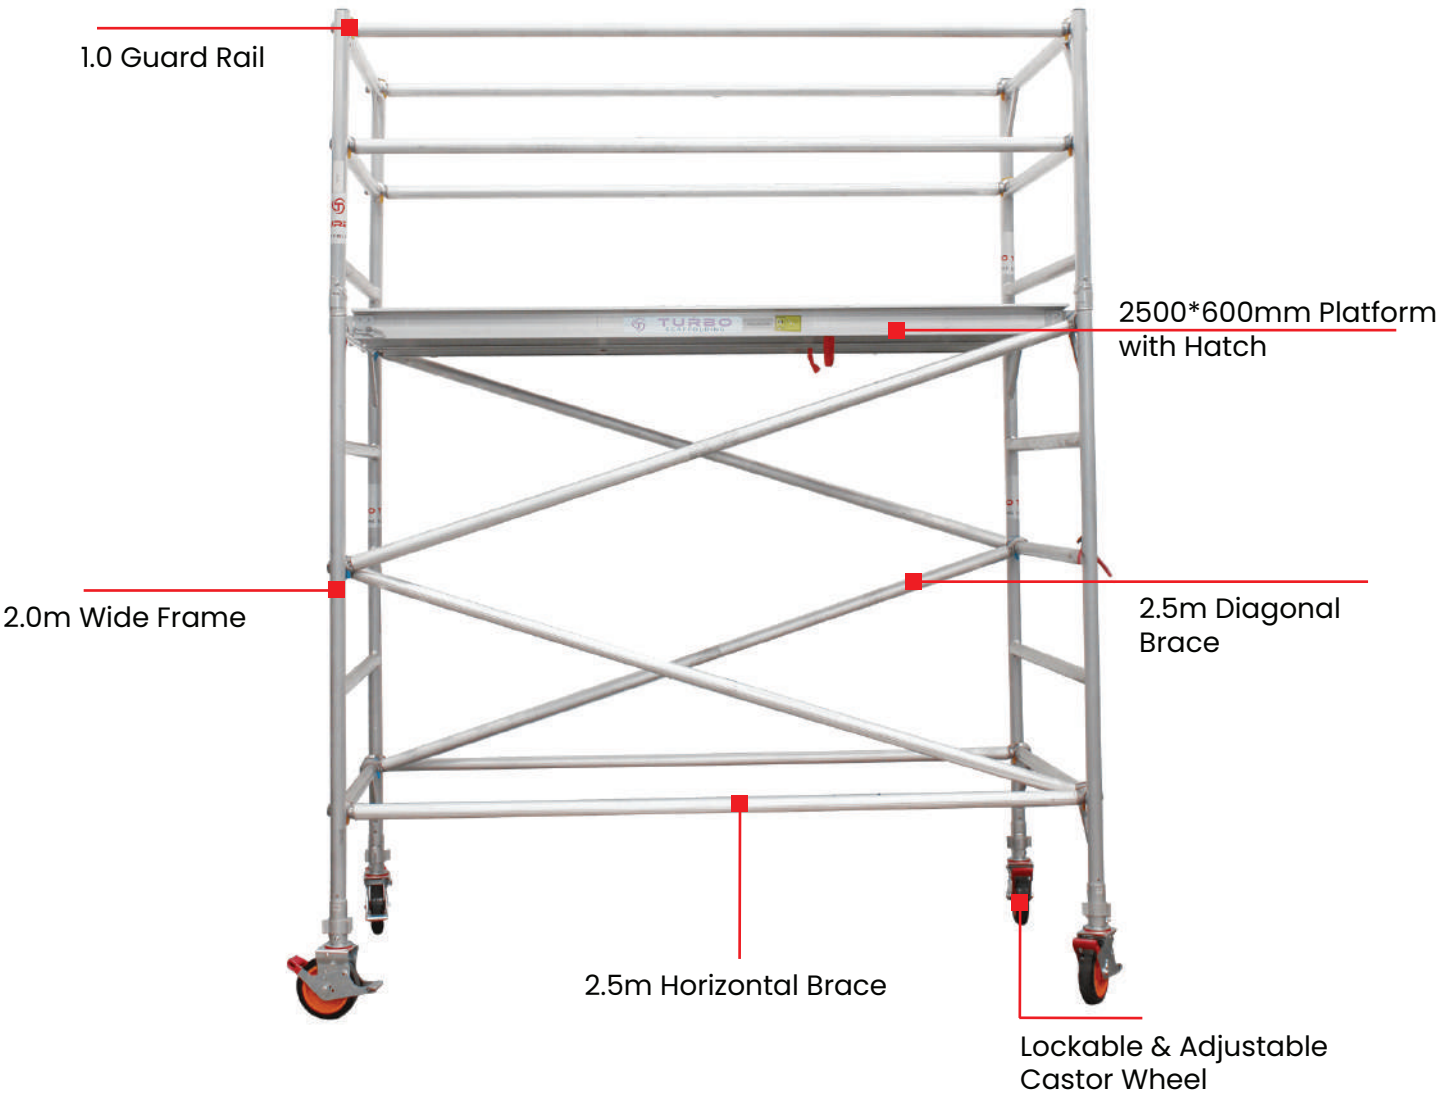

SEE PACKAGE INCLUSIONS

Code	Description	Qty
CWA8	TURBO 8- inch (200mm) Lockable & Adjustable Castor Wheel	4
WF4	1.6m Wide Frame - Aluminium	2
WG1	1.0m Wide Guard Rail	2

A diagram of a metal frame structure, likely a scaffold or shelving unit, with a width of 2.0m. The structure consists of two vertical end rails connected by three horizontal cross-braces. Diagonal bracing is present on the outer rails. The text "2.0m" is written below the structure.

16m

Diagram illustrating a scaffolding structure with a length of 12m.

1.0m

Side view of the bridge model, showing its length and support structure. The bridge is supported by two vertical pillars. The total length of the bridge is indicated as 3.0m.

2.5m

2.5m

Mobile Tower Sizes

1.9m- 2.2m

2.3m- 2.6m

2.7m- 3.0m

3.1m - 3.4m

3.5m - 3.8m

3.9m - 4.2m
